

A wide-angle photograph of an industrial gas processing facility. In the foreground, several large, horizontal, silver-colored pipes run across a metal walkway. Above these pipes are three large, red, cylindrical valves or filters. In the background, four tall, grey, spiral-patterned smokestacks rise into the sky, with wisps of white smoke or steam emerging from them. The facility is surrounded by a complex network of yellow metal scaffolding and pipes. The ground is a mix of gravel and concrete. In the far distance, a range of brown, arid hills is visible under a clear blue sky.

● **Phases 9&10 South Pars Gas Field Development.**

The image shows a large-scale industrial development, likely a gas processing plant, set against a backdrop of rugged, arid mountains. In the foreground and middle ground, there is a complex network of yellow-painted steel structural frames, pipes, and walkways. Several tall, grey, spiral-ribbed chimneys or ventilation stacks rise vertically from the facility. To the right, there are large, white, cylindrical storage tanks. The overall scene is one of active industrial construction or operation in a desert environment.
